

SIMIS

F1 SIMULATORS

Simulators can operate as a simple entertainment break from conferences or can form the main event by means of running a full competition, perhaps with the addition of our pit stop challenge as a secondary enhanced activity.

We provide a first class service with delivery and installation into the venue. Speedy and efficient set-up with full operator attendance throughout. This service can be personalized to meet your clients' specific brief if required. The professionalism of our service, coupled with the authenticity and quality of our products make SiMiS F1 Simulators the perfect choice for your event entertainment requirements.

info@bobsalisbury.co.uk

Delivery within a 50 mile radius of our headquarters at the Silverstone Circuit in Northamptonshire is included. Thereafter a nominal mileage rate applies.

SIMIS

F1 SIMULATORS

Experience the thrill of driving around the Silverstone track in a Formula 1 car, all from the security and comfort of your corporate venue. "Fantastically realistic", "superb looking" and "a highly entertaining experience", just some of the comments received from our existing clients. SiMiS F1 simulators really are the ultimate entertainment solution.

SiMiS is brought to you by parent company, Bob Salisbury Engineering, itself a leader in the field of F1 replica showcars, with a client list which includes five of the current Formula 1 teams. SiMiS was set up in 2001 and began by supplying simulators exclusively within the Formula 1 industry. Since then it has branched out into the corporate sector where it combines the technical abilities of its parent company with its own professionalism and reputation within the simulator sector to provide clients with an unrivalled service, all at a very competitive price.

BOB SALISBURY
ENGINEERING

We have a wide range of products from full size F1 cars down to small framework racing seats. All of these products provide guests with an unrivalled driving experience, and all incorporate the latest in F1 simulation technology; including force feedback steering and truly realistic noise and vibrations which one would associate with a drive in one of the world's fastest machines. The cars are built from genuine F1 moulds and replicate the authenticity of the "real thing" in their aerodynamic shape, suspension and components.

The cars offer clients the opportunity for brand association with a variety of livery packages offered. From basic logo placement to full vinyl-wrapping and design incorporation, it is literally a blank canvas for your design ideas should you require it.
